

Drive Measurable Improvements in the Enterprise Supply Chain

ModusLink manages supply chains for many of the world's leading companies:

- Computing, storage and networking products
- Consumer electronics, luxury brands and packaged goods
- Wireless communications
- Semiconductors
- Software
- Medical devices and pharmaceutical supply
- Brick and mortar retail giants
- Leading e-commerce enterprises

PROVEN RESULTS

By integrating ModusLink's services into their operations, our clients have:

- Reduced distribution costs by as much as 30%
- Reduced inventories by 40%
- Reduced materials expense by an average of 10-15%
- Reduced shipping costs by up to 45%

FIND NEW OPPORTUNITIES TO STREAMLINE AND SAVE

For global enterprises enjoying industry leadership, the usual benefits associated with supply chain scale are frequently offset by a lack of flexibility to drive cost reduction and service improvements.

Large manufacturing and third party logistics partners can provide scale but struggle to effectively meet the varying demands of customers across multiple channels and geographies.

Finding new ways to reduce costs and to streamline the process of getting products to market requires an innovative end-to-end supply chain partner that can integrate within your existing operations and deliver the flexibility that your business requires.

Expect More

In today's competitive environment, supply chain improvement is not a one-time exercise.

Your customers expect innovation that makes their life and their business easier, more productive and more profitable. Similarly, you need a true business partner that understands where to look for incremental savings opportunities.

ModusLink's expertise extends to areas like packaging design that can reduce waste, lower shipping costs and contribute to your company's sustainability initiatives. We have highly effective processes for SKU management and inventory reduction. Our value-added warehousing and distribution services speed time-to-market. And our reverse logistics programs that cover returns, repair, refurbishment and recycling can turn after-the-sale costs into a structured revenue stream

TURN YOUR CALL CENTER INTO A BUSINESS ADVANTAGE

ModusLink has more than 30 years of experience helping category-leading enterprises reduce operational costs and streamline some of the world's most complex supply chains.

From streamlining the inbound supply of materials into multiple manufacturing locations, to executing postponement strategies close to the customer, to the efficient management of spare parts and return programs, ModusLink has proven capabilities and works on behalf of leading OEMs to deliver a more agile supply chain and get the most from contract manufacturers and transportation-centric third party logistics providers.

ModusLink's extensive global operations footprint is unified by a robust technology infrastructure including SAP ERP, warehouse management systems, and a range of supply chain improvement tools for value-added disciplines like network optimization, transportation management and packaging redesign.

Continuous Improvement

While creative and on the leading edge, our supply chain and logistics programs are also highly structured and rigorously monitored. Lean Sigma process development and continuous improvement are guiding principles of ModusLink's operations and we work alongside your quality teams to ensure adherence to your business standards.

Our solution centers are routinely audited and certified by the leading world standards organizations. ModusLink's global certifications include ISO 9001, ISO 14001, ISO 13485, EICC, R2, C-TPAT, and AIO.
